

Filter Technology - Intake Pit Filter

Assembly of modules

1. The upper module is placed on top of the lower module and they are united with bolts type M8.
2. If necessary, the floor is to be aligned horizontally. Then each module is fixed to the floor with expansion bolts or the like.
3. The sections are united with mounting fixtures at the top of the dust chamber.
4. In addition to the floor fastening, the modules are to be fixed to the wall, as well (at the top of the dust chamber, - for instance in the mounting fixtures).
