Best Available Techniques (BAT)

Chapters in the BAT conclusions for the food, drinking and dairy industries relevant for use of bag filters for reduction of emissions

Animal feed production - Chapter 2

Brewing - Chapter 3

• Dairies - Chapter 4

Grain milling - Chapter 8

Oilseed processing and vegetable oil refining
Chapter 10

Starch production - Chapter 12

## Chapter 2 – Animal feed – BAT 17

#### **Emissions to air**

BAT 17. In order to reduce channelled dust emissions to air, BAT is to use one of the techniques given below.

| Technique |            | Description       | Applicability  |  |
|-----------|------------|-------------------|--|--|
| a         | Bag filter | See Section 14.2. | May not be applicable to the abatement of sticky dust. |  |
| b         | Cyclone    |                   | Generally applicable.                                  |  |

# BAT-associated emission levels (BAT-AELs) for channelled dust emissions to air from grinding and pellet cooling in compound feed manufacture

| Parameter | Specific process | Unit   | BAT AEL<br>(average over the sampling period) |                 |
|-----------|------------------|--------|---|-----------------|
|           |                  |        | New plants                                    | Existing plants |
| Duct      | Grinding         |        | < 2-5   | < 2-10          |
| Dust      | Pellet cooling   | mg/Nm³ | < 2-20  |                 |

## Chapter 3 – Brewing – BAT 20

#### **Emissions to air**

BAT 20. In order to reduce channelled dust emissions to air, BAT is to use a bag filter or both a cyclone and a bag filter.

# BAT-associated emission levels (BAT-AELs) for channelled dust emissions to air from handling and processing of malt and adjuncts

| Parameter | Unit   | BAT-AEL<br>(average over the sampling period) |                 |  |
|-----------|--------|---|-----------------|--|
|           |        | New plants                                    | Existing plants |  |
| Dust      | mg/Nm³ | < 2-5   | < 2-10          |  |

## Chapter 4 – Dairies – BAT 23

#### **Emissions to air**

BAT 23. In order to reduce channelled dust emissions to air from drying, BAT is to use one or a combination of the techniques given below.

|     | Technique    | Description       | Applicability  |
|-----|--------------|-------------------|--|
| (a) | Bag filter   |                   | May not be applicable to the abatement of sticky dust. |
| (b) | Cyclone      | See Section 14.2. | Conorally applicable                                   |
| (c) | Wet scrubber |                   | Generally applicable.                                  |

### BAT-associated emission level (BAT-AEL) for channelled dust emissions to air from drying

| Parameter | Unit   | BAT-AEL (average over the sampling period) |
|-----------|--------|--|
| Dust      | mg/Nm³ | < 2-10 (¹)                                 |

<sup>(1)</sup> The upper end of the range is 20 mg/Nm3 for drying of demineralised whey powder, casein and lactose.

# Chapter 8 – Grain milling – BAT 28

### **Emissions to air**

BAT 28. In order to reduce channelled dust emissions to air, BAT is to use a bag filter.

#### BAT-associated emission level (BAT-AEL) for channelled dust emissions to air from grain milling

| Parameter | Unit   | BAT-AEL (average over the sampling period) |
|-----------|--------|--|
| Dust      | mg/Nm³ | < 2-5                                      |

## Chapter 10 – Oilseed processing and vegetable oil refining – BAT 31

#### **Emissions to air**

BAT 31. In order to reduce channelled dust emissions to air, BAT is to use one or a combination of the techniques given below.

| Technique |              | Description       | Applicability  |  |
|-----------|--------------|-------------------|--|--|
| (a)       | Bag filter   |                   | May not be applicable to the abatement of sticky dust. |  |
| (b)       | Cyclone      | See Section 14.2. | Companily annihable                                    |  |
| (c)       | Wet scrubber |                   | Generally applicable.                                  |  |

BAT-associated emission levels (BAT-AELs) for channelled dust emissions to air from handling and preparation of seeds as well as drying and cooling of meal

| Parameter | Unit   | BAT-AEL<br>(average over the sampling period) |                 |  |
|-----------|--------|---|-----------------|--|
|           |        | New plants                                    | Existing plants |  |
| Dust      | mg/Nm³ | < 2-5 (¹)                                     | < 2-10 (¹)      |  |

<sup>(1)</sup> The upper end of the range is 20 mg/Nm3 for drying and cooling of meal.

## Chapter 12 – Starch production – BAT 34

#### **Emissions to air**

BAT 34. In order to reduce channelled dust emissions to air from starch, protein and fibre drying, BAT is to use one or a combination of the techniques given below.

| <u> </u> | Technique    | Description       | Applicability  |
|----------|--------------|-------------------|--|
| (a)      | Bag filter   |                   | May not be applicable to the abatement of sticky dust. |
| (b)      | Cyclone      | See Section 14.2. | Generally applicable.                                  |
| (c)      | Wet scrubber |                   | Generally applicable.                                  |

Table 27

# BAT-associated emission levels (BAT-AELs) for channelled dust emissions to air from starch, protein and fibre drying

| Parameter | Unit   | BAT-AEL (average over the sampling period) |                 |  |
|-----------|--------|--|-----------------|--|
| rarameter |        | New plants                                 | Existing plants |  |
| Dust      | mg/Nm³ | < 2-5 (¹)                                  | < 2-10 (¹)      |  |

<sup>(4)</sup> When a bag filter is not applicable, the upper end of the range is 20 mg/Nm<sup>3</sup>.

# BAT 5 - monitoring

BAT 5. BAT is to monitor channelled emissions to air with at least the frequency given below and in accordance with EN standards.

| Substance/<br>Parameter | Sector        | Specific process   | Standard(s) | Minimum monitoring frequency (1) | Monitoring<br>associated with |
|-------------------------|---------------|--|-------------|----------------------------------|-------------------------------|
|                         |               | Drying of green fod-<br>der                                    |             | Once every three<br>months (2)   | BAT 17                        |
|                         | Animal feed   | Grinding and pellet<br>cooling in compound<br>feed manufacture |             | Once every year                  | BAT 17                        |
| Dust                    |               | Extrusion of dry pet<br>food                                   | EN 13284-1  | Once every year                  | BAT 17                        |
|                         | Brewing       | Handling and pro-<br>cessing of malt and<br>adjuncts           | ro-<br>md   | Once every year                  | BAT 20                        |
|                         | Dairies       | Drying processes   |             | Once every year                  | BAT 23                        |
|                         | Grain milling | Grain cleaning and<br>milling                                  |             | Once every year                  | BAT 28                        |

# BAT 5 - monitoring

| Substance/<br>Parameter | Sector   | Specific process   | Standard(s) | Minimum monitoring frequency (¹) | Monitoring associated with |
|-------------------------|--|--|-------------|----------------------------------|----------------------------|
|                         | Oilseed pro-<br>cessing and<br>vegetable oil<br>refining | Handling and pre-<br>paration of seeds,<br>drying and cooling of<br>meal | ls,         |                                  | BAT 31                     |
|                         | Starch pro-<br>duction                                   | Drying of starch,<br>protein and fibre                                   |             |                                  | BAT 34                     |
|                         | Sugar manu-<br>facturing                                 | Drying of beet pulp  |             | Once every month (2)             | BAT 36                     |
